

Minimum Viable Product

-We need users in some form to save their event bookings

-As a customer I want my bookings to be saved and be able to access them whenever

-User needs to be able to make multiple events

-Push them to create a new event on first login

-As a customer I want to be able to create events

-As a customer I want to be able to edit event info, like its name, type, date, etc

-Invoice itemizes all the services in your event and tallies a total cost

-As a customer I want to track the cost of my events

-Event should list all the services in that event

-As a customer I want to review the services in my booked event

-Sort by price

-Filter by a price range

-As a customer I want to be able to sort by price

-As a customer I want to filter out services out of my price range
